

CYBER SECURITY TASK 01

PART C – ACCOUNT SECURITY CHECK

NAME : BHAKTI MAHADEV PARHAD

Introduction :

Online accounts store important personal and professional information, making their security essential. This assessment reviews the security settings of three online accounts by checking the use of Multi-Factor Authentication (MFA), strong passwords, and recovery email configuration to ensure they follow basic cybersecurity best practices.

Online Account	MFA Enabled	Strong Password	Recovery Email Configured	Remarks
Google	Yes	Yes	Yes	2-Step Verification enabled with recovery email configured.
GitHub	Yes	Yes	Yes	Two-Factor Authentication enabled with a unique, strong password.
LinkedIn	Yes	Yes	Yes	Two-Step Verification enabled with recovery email configured.

Conclusion :

The review of my online accounts helped me evaluate the effectiveness of my current security practices. Features such as strong passwords, Multi-Factor Authentication, and recovery email addresses provide additional layers of protection against unauthorized access. This assessment also highlighted the importance of regularly reviewing account security settings to maintain good cyber hygiene and protect sensitive information.
